IN THE CLAIMS:

Cancel claims 1-12.

13. (New) A computer readable storage medium, comprising executable instructions to:

compute a similarity value through triangulation that compares a first document and a second document to a third document operative as a reference;

assess the similarity value to identify a non-exact similarity match; and

perform a director comparison of two documents based upon a non-exact similarity match.

14. (New) The computer readable storage medium of claim 13 wherein the executable instructions to compute include executable instructions to process a first feature vector associated with the first document, a second feature vector associated with the second document, and a third feature vector associated with the third document.

15. (New) The computer readable storage medium of claim 13 wherein the executable instructions to assess include executable instructions to compare the similarity value to a threshold value.

16. (New) The computer readable storage medium of claim 13 wherein the executable instructions to perform a direct comparison include executable instructions to perform a direct pattern comparison between two documents.

17. (New) The computer readable storage medium of claim 13 wherein the executable instructions to perform a direct comparison include executable instructions to perform a feature vector comparison between two documents.
